same, sent in a Letter from Father Camelli, to Mr. John Ray, and Mr. James Petiver, Fellows of the Royal Society. VII. An Account of a Stone found in the Stomach of a Lady on Dissection, another in the left Kidney, and some smaller ones in the Gall-Bladder. By Mr. William Clerk, Surgeon. Communicated by Dr. Charles Preston. VIII. Part of a Letter from Mr. Buflicere, to Dr. Sloane, wherein he gives an Account of the new way of Cutting for the Stone by the Hermit, with his Opinion of it. IX. The Extract of a Letter from Mr. Petto, concerning some Parelii, seen at Sudbury in Suffolk, December the 28th, 1698. Communicated by Dr. Beverley.

I. A further Account of what was contain'd in the Chinese Cabinet, by Hans Sloane, M. D.

A Sea-Horse Tooth.  
Cow-Bezoar. This was roundish, as big as a Hens Egg, made of Lamina, or Plates, one Layer on another, after the manner of true Bezoar, but melts when applied to the Candle, and therefore is not true, but factitious.
A pair of Brass Tweezers.
A round Metalick Speculum, used as a Looking-Glas,
two inches Diameter.
A Malaya Purse made of Straw, Platted or Woven
as are Straw-hats.
Two Bone Probes.
Four China Pencils, with these the Chinese write their
Letters, as we do with Pens.
One wide Tooth'd Comb of one piece of wood.
One strait tooth'd Combe: Its Teeth are all distinct
flat pieces of wood, sharp at both ends, set together and
fastened to one another by two pieces of Reed, laid over
their middles.
An Instrument to clean the Combs, of three Teeth.
Nux Vomica.
Bamboo Stone.
Books of China Leaf Gold, the Leaves of some of
which are an Inch and half Square, others four In-
ches. The Paper was of the ordinary China Paper, like-
ly made of Silk or Cotton. The Chinese Guild Paper on
one side with this leaf Gold, then cut it in long pieces,
they then weave it into their Silks, which makes them,
with little or no Cost, look very rich and fine. The same
long pieces are twisted or turn'd about Silk Thread by
them, so artificially, as to look finer than Gold Thread,
the it be of no great value.
A Sheet of brown Paper from China. This sort of
brown Paper, which is smooth and thin, is made use of
in lieu of Linnen Cloath or Rags, to spread Oynm-
ments on, to apply to Sores, in the Hospitals in
Paris.
Two Steel Instruments for polishing Rafors, each
of them crooked and two inches long.

Semen
Semen Phaseoli Zurattensis, or Couhage, Raí his. plant. used for Curing Dropfies.

A great black Scarabæus, a Scarlet Butterfly, an Ash-coloured Capricorn; a Locust, and a Phalæna, all to pieces.

An Indian Hone, a blackish Colour.
A China Hone like ours.

An Indian Hone, to be used after the Stone, to smooth the points of Lancets, Æc. this is made of a kind of white Wood, as light as touchwood.

A Painters Brusli, made of the Stalk of a Plant, the Fibres of which, at both ends, being fretted asunder and tyed together again, serve for a Brush.

A Box of several kinds of China Ink, with Characters on them.

It were to be wished other Travellers into Foreign Parts would make such enquiries (as Mr. Buckley, who sent these to the Royal Society has done) into the Instruments and Materials made use of in the places where they come, that are any manner of way for the Benefit or innocent delight of Mankind, that we may content our selves with our own Inventions, where we go beyond them, and imitate theirs wherein they go beyond ours.
